

Abstract

An electronic apparatus that is protected from theft, and is provided with panels having excellent operability and viewability. The apparatus comprises
5 a housing, and a first panel and second panel provided on the front face side of the housing. An operation section is provided on one face of the first panel, a display section is provided on one face of the second panel, and a panel cover that can hide the front face
10 of the housing is provided on the other face of the first panel. A slider is provided in the housing, and the slider is movable in forward and backward directions of the housing. There is provided panel-rotating means, which functions such that, when the
15 first panel and second panel are received in the housing side, the means raises and holds the operation section and display section in the vertical direction in an opposed manner, and, when the slider is moved forward, the means rotates the first panel
20 so that the upper end section of the first panel is moved forward, and rotates the second panel so that the upper end section of the second panel is moved backward.
